FTTH-073 Optical Fiber Winding Terminal Box

Application:

Used in the home work area, complete the access and output of optical fiber, can fully meet the requirements of the bending radius of optical fiber, and protect the entry and exit of optical fiber, provide safe protection for the fiber core.

Features:

1. Dimensions:Cover: 93*83*13.7mm , Base:93*83*6.6mm ; Middle fan:D78*25 mm.
2. Material:ABS
3. Color:White
4. The bottom cover is divided, easy to construct and install, easy to operate and maintain.
5. The optical fiber desktop box is provided with placement holes for unit optical fiber adapters and inlet and outlet holes for pigtail or leather cable, which can complete the access and port output of optical fibers.
6. A tray fiber boss is arranged on the bottom plate of the box body, which is convenient for reserving optical cable or redundant optical cable disk storage. The design of optical path can meet the storage requirements of optical fiber bending radius and small amount of redundant optical fiber at the same time, and provide security for incoming and outgoing optical fibers.
